                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-JUL-2000 (first entry)
                        the course of the invention. The specification describes a method for detecting antibodies against Treponema pallidum. The antibodies are detected in a sample by reaction with a fusion protein antigen, present in the mixture in limiting concentration. The fusion protein antigen comprises a Treponema pallidum membrane antigen. The method is used for diagnosis of syphilis.

                                                                                                                                                                                                                                                                                                     δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                               CC Host cells genetically modified to express uridine phosphorylase (UdP)
CC and purine nucleoside phosphorylase (PNP) or their corresponding crude or
CC purified extracts, either separately or in combination are used as
CC catalysts of transglycosylation reactions between a donor nucleoside and
CC an acceptor base, forpreparing nucleoside analogues containing
CC heterocyplic systems, with purine and/or pyrimidine bases substituted by
CC one or more nitrogen atoms, for preparing alpha-pentose-1-phosphate
CC sugars by phosphorolysis reactions and for producing nucleosides and
CC modified nucleoside analogues (all claimed). The modified or natural
CC nucleosides are used directly or as intermediates in the preparation of
CC drugs with anti-viral and anti-tumour activity and for preparing
CC comprising at least one gene sequence of a mesophilic bacterium coding
CC comprising at least one gene sequence of a mesophilic bacterium coding
CC comprising at least one gene sequence of a mesophilic bacterium coding
CC the E. coli udp and deoD genes are used. Recombinant strains produced
CC using the vectors express polypeptides with enzyme UdP and PNP activity
CC times higher PNP activity than non-transformed corresponding wild type
CC strains.

The present sequence represents the kappa light chain plasmid pLC6G5 which includes the kappa constant region and polyadenylation site. Anti-CD4 antibodies may be used in therapeutic and diagnostic applications, especially for the treatment of human diseases. These antibodies reduce activity of CD4 cells and reduce undesirable autoimmune reactions, inflammatory response and transplant rejection. Transgenic animals are capable of producing heterologous antibodies of multiple isotypes by undergoing isotype switching. These animals produce a first 1g type that is necessary for antigen-stimulated B-cell maturation and can switch to encode and produce one or more subsequent heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel anti-CD4 antibody produced by transgenic mice - used treatment of auto-immune disease etc. % \frac{1}{2} \left( \frac{1}{2} \right) = \frac{1}{2} \left( \frac{1}{2} \right) \left( \frac{1}{2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             10-OCT-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1935
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   840
```

The present sequence represents a plasmid, pLC6G5,

which contains

```
synthetic kappa light chain sequence (created using oligonucleotide AAV39244-65). This synthetic sequence differs from natural sequences in that strings of repeated oligonucleotides are interrupted (to facilitate oligonucleotide synthesis and PCR amplification), optimal translation initiation sites are incorporated and Hindri sites were engineered upstream of the translation initiation sites. The plasmid is used in the construction of minigenes for expression of IgGkappa anti-CD4 antibodies, in the transgenic mouse of the invention. The specification describes transgenic non-human animals, especially a mouse, which are capable of producing a human heterologous antibodies of multiple isotypes by undergoing isotype switching. The transgenes are capable of functionally rearranging a heterologous diversity (D) gene in a variable-diversity-junction (V-D-J) recombination. The transgenes is the transgenes are capable of production and the second of the second of the construction of the transgenes are capable of functionally rearranging a heterologous diversity (D) gene in a variable-diversity-junction (V-D-J) recombination. The transgenes
injury. CD4 binding antibodies are used to reduce undesirable autoimmune reactions, inflammatory responses and rejection of transplanted organs. The anti-IL-8 antibodies can reduce tissue damage and prolong survival in animal models of acute adult respiratory distress syndrome (ARDS) and acid induced lung injury. The anti-IL-8 antibodies can also be used for the treatment of vasculitis, septic shock, allergic reactions (e.g. asthma) and cystic fibrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              include a heavy chain transgene comprising at least one V, D and J gene segment, and one constant region gene segment. The immunoglobulin (Ig) light chain transgene comprises at least one V and J gene segment and or constant region gene segment. The gene segments are heterologous to the transgenic animal. The antibody can be used to prevent efflux of neutrophils from vasculature. It can also be used to treat reperfusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             one

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    suitable for generating a hybridoma, which produces a detectable amount of an immunoglobulin that specifically binds digoxin or shinga-like toxin. B cells from transgenic animals can be used to generate hybridomas expressing monoclonal high affinity human sequence antibodies. Antibodies produced from the transgenic animals of the invention can be used to treat human diseases, e.g. autoimmune diseases, cancer, infectious disease, transplant rejection, blood disorders such as coagulation diseaser and other diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Дd
                                                                                        The present invention relates to a conditional gene trapping construct capable of causing conditional mutations in genes. The gene trapping construct comprises two functional DNA segments, each being flanked by two recombinase recognition sequences (RRSs) specific to site specific recombinase which is capable of unidirectional inversion of double standard DNA segment. One of the DNA segment (disruption cassette) is inserted in antisense orientation relative to the transcriptional orientation of the gene to be trapped. The other DNA segment (selection cassette) is inserted in sense direction relative to the transcriptional orientation of the gene to be trapped. The coll comprising the gene trapping construct is useful for the identification and/or isolation of genes. The transgenic organism comprising the gene trapping construct is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Chimeric -

                                                                                                                                                      The present sequence represents the kappa light chain plasmid, pCK7-96, which includes the kappa constant region and polyadenylation site. The CC plasmid is used in the construction of minigenes for expression of CC Igdkappa anti-CD4 antibodies, in the transgenic mouse of the invention. CC The specification describes transgenic non-human animals, especially a cc mouse, which are capable of producing a human heterologous antibodies of multiple isotypes by undergoing isotype switching. The transgenic animals cc have human heavy and light chain transgenes. The transgenes are capable of functionally rearranging a heterologous diversity (D) gene in a cc variable-diversity-junction (V-D-J) recombination. The transgenes include a heavy chain transgene comprising at least one V, D and J gene segment, and one constant region gene segment. The immunoglobulin (Ig) light chain transgene comprises at least one V and J gene segment and one constant cc animal. The antibody can be used to prevent eflux of neutrophils from cv asculature. It can also be used to treat reperfusion injury. CD4 binding antibodies are used to reduce undesirable autoimmune reactions, inflammatory responses and rejection of transplanted organs. The canimal models of acute adult respiratory distress syndrome (ARDS) and acid induced lung injury. The anti-IL-8 antibodies can also be used for the treatment of vasculitis, septic shock, allergic reactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               isotype switching; neutrophil efflux; reperfusion injury; CD4 binding; autolimmune reaction; inflammatory response; transplant rejection; acid induced lung injury; acute adult respiratory distress syndrome; ARDS; vasculitis; septic shock; allergic reaction; asthma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Hybridoma producing antibody specific for interleukin-8 - prevent efflux of neutrophils from vasculature, and treat

A novel composition has been developed which comprises an immunoglobulin (19) having an affinity constant (Ka) of at least 2 multiply 1000000000 M-1 for binding to a predetermined human antigen. The present sequence represents the kappa light chain plasmid pCK7-96 which includes the kappa constant region and polyadenylation site. Anti-CD4 antibodies may be used in therapeutic and diagnostic applications, especially for the treatment of human diseases. These antibodies reduce activity of CD4 cells and reduce undesirable autoimmune reactions, inflammatory response and transplant rejection. Transgenic animals are capable of producing heterologous antibodies of multiple isotypes by undergoing isotype switching. These animals produce a first 1g type that is necessary for antigen-stimulated B-cell maturation and can switch to encode and produce one or more subsequent heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Kappa light chain plasmid pCK7-96

The antibodies are isolated form a hybridoma, comprising B cells, that is obtained from a transgenic mouse having a genome comprising a human heavy chain transgene and a human light chain transgene. The B cells are fused to immortalized cells suitable for generating a hybridoma, which produces a detectable amount of an immunoglobulin that specifically binds digoxin or Shinga-like toxin. B cells from transgenic animals can be used to generate hybridomas expressing monoclonal high affinity human sequence antibodies. Antibodies produced from the transgenic animals of the liventh of the capacity in the contraction of the capacity infortions disease the capacity blood.
